SENSE - Bath / Shower Mixer Installation & Aftercare Instructions

Installation Procedures

TOOLS NEEDED: Adjustable spanner , PTFE tape

- 1) Prior to installation flush out the pipe work to remove debris and then ensure the water supply is turned off.
- 2) Refer to diagram to ensure all components are present and to identify the correct way to install the water supply lines. The spout should be positioned over the drainage hole in the bath tub with the remaining controls positioned at either side. Use the diagrams as a reference to fit the temperature control and diverter handles.
- 3) When connecting the shower head and braided hose to the system, position the counter weight in a position on the flexible hose that allows it to be pulled completely from the shower head holder.
- 4) When connecting the water supply to the temperature control handle, use PTFE tape on the threads to form a watertight seal. The hot water supply should always be connected to the left hand inlet.
- 5) Turn the water supply back on, and using the temperature control handle, leave the water flowing for a full minute to completely flush the system.
- 6) Whilst the water is still running, divert the water to the shower head in order to check the water flow.
- 7) Check all connections for any leaks.

Aftercare Instructions

Whilst the item has a high quality durable finish, it should nevertheless be treated with care. Surfaces should be cleaned only using a soft damp cloth and clean water and dried using a soft cotton cloth. Bath cleaning products, even non scratch ones could damage the finished surface.
